Continuing Legal Education (CLE) Provided by:
Diana Schmitt & Associates Certified Legal Nurse Consultants

CLE courses provided by Diana Schmitt & Associates are developed with attorneys' and their legal staffs' medical record case analysis needs in mind. Our goal is to educate attorneys and legal staff by utilizing actual case examples and interactive session activities. These activities will enhance case screening and discovery processes employed in your practice as well as trial preparation.

You need more than a potential plaintiff or defendant with a tragic story. You need to know if the medical records support your client's allegations. Certified Legal Nurse Consultants[®] are qualified to analyze medical records and form opinions concerning their content in relation to allegations.

Each live CLE session (and available home study course complete with a DVD) encourages participants to examine their own interoffice processes that involve merit review and case development. Move through each session and come away with strategies which will enable you to:

- *See how Certified Legal Nurse Consultants[®] analyze medical records systematically and efficiently while focusing on relevant information.*
- *Learn strategies that enhance case screening and raise the value of your cases.*
- *Handle case examples and experience:*
 - *Comparative analysis, the key to finding relevant facts*
 - *Conflicts in medical records and how to reconcile them*
 - *Allegations not supported in medical records*
 - *Medical literature research strategies that move your case forward*

Contact us about our CLE courses. We would be pleased to discuss any case needs that involve medical records or health issues. Go to our website <http://DianaSchmitt.com> and view our latest newsletter, *Theory to Fact: Medical Record Analysis*, for more educational topics.

Thank you for your interest,

Diana Schmitt, RN, BSN, CLNC
